

How to make a color managed print with Photoshop 6

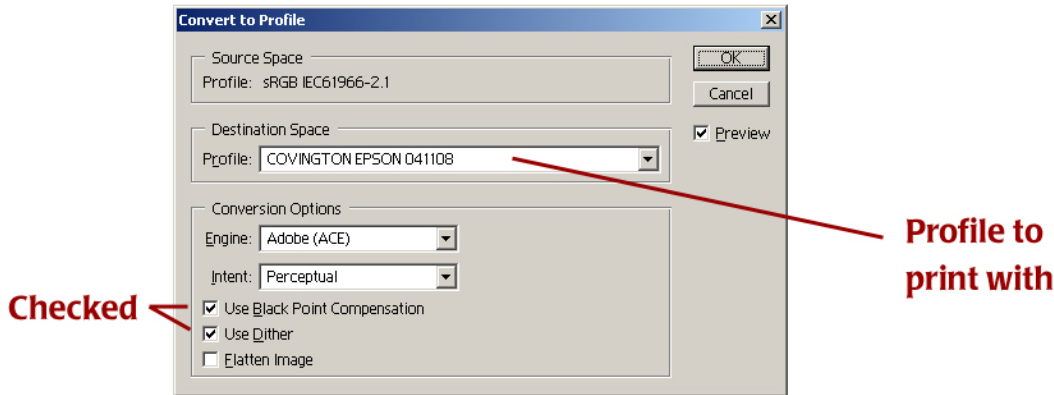

Covington Innovations - Internal Use Documentation

[1] Assign a color profile to the image file.

Image > Mode > Assign Profile > either Working RGB or Adobe RGB.

[2] Convert the print to the printer's color profile.

Image > Mode > Convert To Profile...

Some useful printer profiles are:

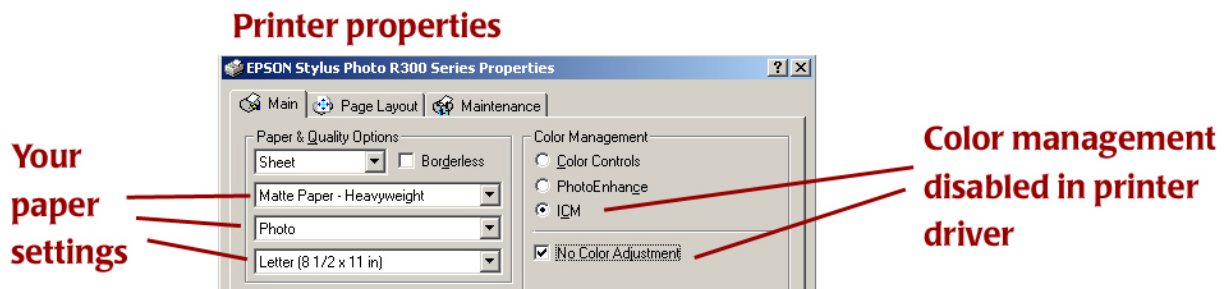

COVINGTON EPSON 041108 - our home-grown one (editable w. Monaco EZcolor)

KProIJPaper Epson R300 - Kodak's official profile for their glossy paper (works w. all papers, prints lighter)

SPR300 Matte Paper HW etc. - Epson's official profiles for their papers (darker, more contrast)

[3] Make final adjustments to how the picture looks.

[4] Print with the following options to keep any more color correction from taking place.
