

Digital SLR Astrophotography

by Michael A. Covington

Cambridge University Press
2007

*The following pages are a DRAFT TABLE OF CONTENTS
from an unfinished version of the book manuscript.
The page numbers DO NOT APPLY to the finished, printed book.*

Contents

| | |
|--|-----------|
| I Basics | 16 |
| 1 The DSLR Revolution | 17 |
| 1.1 What is a DSLR? | 21 |
| 1.2 Choosing a DSLR | 22 |
| 1.2.1 Major manufacturers | 22 |
| 1.2.2 Shopping strategy | 24 |
| 1.3 Choosing software | 25 |
| 1.3.1 Photo editing | 25 |
| 1.3.2 Astronomical image processing | 26 |
| 1.3.3 Freeware | 26 |
| 1.3.4 Judging software quality | 27 |
| 1.4 Is a DSLR right for you? | 27 |
| 1.5 Is film dead yet? | 29 |
| 2 Main technical issues | 31 |
| 2.1 Image files | 31 |
| 2.1.1 File size | 31 |
| 2.1.2 Raw vs. compressed files | 32 |
| 2.1.3 “Digital film” and camera software | 32 |
| 2.2 Focusing | 33 |

CONTENTS

| | | |
|----------|--|-----------|
| 2.3 | Image quality | 34 |
| 2.3.1 | Combining images | 34 |
| 2.3.2 | Overcoming sky fog | 34 |
| 2.3.3 | Dark-frame subtraction | 34 |
| 2.3.4 | The Nikon “star eater” | 35 |
| 2.3.5 | Grain | 37 |
| 2.4 | Sensor size and multiplier (zoom factor) | 37 |
| 2.5 | Dust on the sensor | 38 |
| 2.6 | ISO speed settings | 39 |
| 2.7 | No reciprocity failure | 40 |
| 2.8 | How color is recorded | 41 |
| 2.8.1 | The Bayer matrix | 41 |
| 2.8.2 | Low-pass filtering | 42 |
| 2.8.3 | The Foveon | 43 |
| 2.9 | Nebulae are blue or pink, not red | 43 |
| 3 | Basic camera operation | 46 |
| 3.1 | Taking a picture manually | 46 |
| 3.1.1 | Shutter speed and aperture | 46 |
| 3.1.2 | Manual focusing | 48 |
| 3.1.3 | ISO speed | 49 |
| 3.1.4 | White balance | 49 |
| 3.1.5 | Do you want an automatic dark frame? | 49 |
| 3.1.6 | Tripping the shutter without shaking the telescope . | 51 |
| 3.1.7 | Mirror vibration | 51 |
| 3.1.8 | Vibration-reducing lenses | 53 |
| 3.2 | The camera as your logbook | 54 |
| 3.3 | Limiting light emission from the camera | 54 |

CONTENTS

| | | |
|-----------|--|-----------|
| 3.4 | Menu settings | 56 |
| 3.4.1 | Things to set once and leave alone | 56 |
| 3.4.2 | Settings for an astrophotography session | 57 |
| 3.4.3 | Using Nikon Mode 3 | 58 |
| 3.5 | Determining exposures | 58 |
| 4 | Four simple projects | 60 |
| 4.1 | Telephoto Moon | 60 |
| 4.2 | Afocal Moon | 63 |
| 4.3 | Stars from a fixed tripod | 63 |
| 4.4 | Piggybacking | 66 |
| 4.5 | Going further | 70 |
| II | Cameras, Lenses, and Telescopes | 71 |
| 5 | Coupling cameras to telescopes | 72 |
| 5.1 | Optical configurations | 72 |
| 5.1.1 | Types of telescopes | 72 |
| 5.1.2 | Types of coupling | 74 |
| 5.2 | Fitting it all together | 77 |
| 5.3 | Optical parameters | 81 |
| 5.3.1 | Focal length | 81 |
| 5.3.2 | Aperture | 82 |
| 5.3.3 | <i>f</i> -ratio and image brightness | 83 |
| 5.3.4 | Field of view | 87 |
| 5.3.5 | Image scale in pixels | 89 |
| 5.3.6 | "What is the magnification of this picture?" | 89 |
| 5.4 | Vignetting and edge-of-field quality | 90 |

CONTENTS

| | |
|---|------------|
| 6 More about focal reducers | 92 |
| 6.1 Key concepts | 92 |
| 6.2 Optical calculations | 93 |
| 6.3 Commercially available focal reducers | 97 |
| 6.3.1 Lens types | 97 |
| 6.3.2 Meade and Celestron $f/6.3$ | 98 |
| 6.3.3 Meade $f/3.3$ | 99 |
| 6.3.4 Others | 99 |
| 7 Lenses for piggybacking | 101 |
| 7.1 Why you need another lens | 101 |
| 7.1.1 Big lens or small telescope? | 102 |
| 7.1.2 Field of view | 102 |
| 7.1.3 f -ratio | 102 |
| 7.1.4 Zoom or non-zoom? | 104 |
| 7.2 Lens quality | 105 |
| 7.2.1 Sharpness, vignetting, distortion, and <i>bokeh</i> | 105 |
| 7.2.2 Reading MTF curves | 106 |
| 7.2.3 Telecentricity | 108 |
| 7.2.4 Construction quality | 109 |
| 7.2.5 Which lenses fit which cameras? | 109 |
| 7.3 Testing a lens | 110 |
| 7.4 Diffraction spikes around the stars | 113 |
| 7.5 Lens mount adapters | 115 |
| 7.5.1 Adapter quality | 116 |
| 7.5.2 The classic M42 lens mount | 119 |
| 7.6 Understanding lens design | 120 |
| 7.6.1 How lens designs evolve | 120 |

CONTENTS

| | | |
|----------|---|------------|
| 7.6.2 | The triplet and its descendants | 122 |
| 7.6.3 | The double Gauss | 124 |
| 7.6.4 | Telephoto and retrofocus lenses | 125 |
| 7.6.5 | Macro lenses | 125 |
| 8 | Focusing | 126 |
| 8.1 | Viewfinder focusing | 126 |
| 8.1.1 | The viewfinder eyepiece | 126 |
| 8.1.2 | The Canon Angle Finder C | 128 |
| 8.1.3 | Viewfinder magnification | 130 |
| 8.1.4 | Modified cameras | 130 |
| 8.2 | LCD focusing | 131 |
| 8.2.1 | Confirmation by magnified playback | 131 |
| 8.2.2 | LCD magnification | 132 |
| 8.3 | Computer focusing | 132 |
| 8.4 | Other focusing aids | 135 |
| 8.4.1 | Diffraction focusing | 135 |
| 8.4.2 | Scheiner disk (Hartmann mask) | 135 |
| 8.4.3 | Parfocal eyepiece | 135 |
| 8.4.4 | Knife-edge and Ronchi focusing | 137 |
| 8.5 | Focusing telescopes with moving mirrors | 138 |
| 9 | Tracking the stars | 139 |
| 9.1 | Two ways to track the stars | 139 |
| 9.2 | The rules have changed | 143 |
| 9.3 | Setting up an equatorial mount | 143 |
| 9.3.1 | Using a wedge | 143 |
| 9.3.2 | Finding the pole | 144 |

CONTENTS

| | | |
|-----------|---|------------|
| 9.3.3 | The drift method | 144 |
| 9.4 | Guiding | 148 |
| 9.4.1 | Why telescopes don't track perfectly | 148 |
| 9.4.2 | Must we make corrections? | 148 |
| 9.4.3 | Guidescope or off-axis guider? | 149 |
| 9.4.4 | Autoguiders | 152 |
| 9.4.5 | A piggyback autoguider | 154 |
| 9.5 | How well can you do with an altazimuth mount? | 154 |
| 9.5.1 | The rate of field rotation | 156 |
| 9.5.2 | Success in altazimuth mode | 157 |
| 9.5.3 | What field rotation is not | 160 |
| 10 | Power and camera control in the field | 162 |
| 10.1 | Portable electric power | 162 |
| 10.1.1 | The telescope | 162 |
| 10.1.2 | The computer and camera | 163 |
| 10.1.3 | Care of Li-ion batteries | 164 |
| 10.1.4 | Ground loop problems | 164 |
| 10.1.5 | Safety | 165 |
| 10.2 | Camera control | 166 |
| 10.2.1 | Where to get special camera cables | 166 |
| 10.2.2 | Tripping the shutter remotely | 166 |
| 10.2.3 | Controlling a camera by laptop | 171 |
| 10.3 | Networking everything together | 172 |
| 10.4 | Operating at very low temperatures | 175 |
| 11 | Sensors and sensor performance | 177 |
| 11.1 | CCD and CMOS sensors | 177 |

CONTENTS

| | |
|---|------------|
| 11.2 Sensor specifications | 178 |
| 11.2.1 What we don't know | 178 |
| 11.2.2 Factors affecting performance | 180 |
| 11.2.3 Image flaws | 182 |
| 11.2.4 Binning | 185 |
| 11.3 Nebulae, red response, and filter modification | 186 |
| 11.3.1 DSLR spectral response | 186 |
| 11.3.2 Filter modification | 186 |
| 11.3.3 Is filter modification necessary? | 188 |
| 11.4 Filters to cut light pollution | 190 |
| 11.4.1 Didymium glass | 190 |
| 11.4.2 Interference filters | 193 |
| 11.4.3 Imaging with deep red light alone | 193 |
| 11.4.4 Reflections | 195 |
| III Digital Image Processing | 196 |
| 12 Overview of image processing | 197 |
| 12.1 How to avoid all this work | 197 |
| 12.2 Processing from camera raw | 198 |
| 12.3 Detailed procedure with <i>MaxDSLR</i> | 199 |
| 12.3.1 Screen stretch | 202 |
| 12.3.2 Subtracting dark frames | 202 |
| 12.3.3 Converting to color (de-Bayerization, demosaicing) . | 207 |
| 12.3.4 Combining images | 209 |
| 12.3.5 Stretching and gamma correction | 213 |
| 12.3.6 Saving the result | 219 |
| 12.4 Processing from linear TIFFs | 221 |

CONTENTS

| | | |
|-----------|---|------------|
| 12.4.1 | Making linear TIFFs | 221 |
| 12.4.2 | Processing procedure | 222 |
| 12.5 | Processing from JPEG files or other camera output | 223 |
| 13 | Digital imaging principles | 224 |
| 13.1 | What is a digital image? | 224 |
| 13.1.1 | Bit depth | 224 |
| 13.1.2 | Color encoding | 225 |
| 13.2 | Files and formats | 226 |
| 13.2.1 | TIFF | 226 |
| 13.2.2 | JPEG | 226 |
| 13.2.3 | FITS | 227 |
| 13.3 | Image size and resizing | 227 |
| 13.3.1 | Dots per inch | 227 |
| 13.3.2 | Resampling | 228 |
| 13.3.3 | The Drizzle algorithm | 228 |
| 13.4 | Histograms, brightness, and contrast | 229 |
| 13.4.1 | Histograms | 229 |
| 13.4.2 | Histogram equalization | 230 |
| 13.4.3 | Curve shape | 231 |
| 13.4.4 | Gamma correction | 231 |
| 13.5 | Sharpening | 233 |
| 13.5.1 | Edge enhancement | 233 |
| 13.5.2 | Unsharp masking | 234 |
| 13.5.3 | Digital development | 234 |
| 13.5.4 | Spatial frequency and wavelet transforms | 237 |
| 13.5.5 | Deconvolution | 238 |
| 13.6 | Color control | 240 |

CONTENTS

| | |
|---|------------|
| 13.6.1 Gamut | 240 |
| 13.6.2 Color space | 241 |
| 13.6.3 Color management | 241 |
| 14 Techniques specific to astronomy | 242 |
| 14.1 Combining images | 242 |
| 14.1.1 How images are combined | 243 |
| 14.1.2 Stacking images in <i>Photoshop</i> | 247 |
| 14.1.3 <i>Who moved?</i> Comparing two images | 248 |
| 14.2 Calibration frames | 248 |
| 14.2.1 Dark-frame subtraction | 250 |
| 14.2.2 Bias frames and scaling the dark frame | 250 |
| 14.2.3 Flat-fielding | 250 |
| 14.3 Removing gradients and vignetting | 253 |
| 14.4 Removing grain and low-level noise | 255 |
| 14.5 The extreme brightness range of nebulae | 258 |
| 14.5.1 Simple techniques | 258 |
| 14.5.2 Layer masking (Lodriguss' method) | 258 |
| 14.6 Other <i>Photoshop</i> techniques | 263 |
| 14.7 Where to learn more | 263 |
| IV Appendices | 264 |
| A Astrophotography with non-SLR digital cameras | 265 |
| B Webcam and video planetary imaging | 269 |
| B.1 The video astronomy revolution | 269 |
| B.2 Using a webcam or video imager | 270 |

CONTENTS

| | |
|--|------------|
| B.3 Using <i>RegiStax</i> | 272 |
| C Digital processing of film images | 275 |
